PROJECTS

MYCITYPEDIA: One-Stop Complete Directory for a Smart Urban Lifestyle [2023]

Creating an interactive web application providing comprehensive city information, including places to visit, emergency services, local businesses, and RASA-powered chatbot assistance for seamless navigation.

Text Summarization using NLTK, Spacy and Sumy [2023]

Developed text summarization web interface using various Natural language Processing libraries. Flask framework used for the front end. An easy-to-use user interface was provided for users. The use of an extractive approach was done for summarization

Laptop Price Prediction [2023]

Developed laptop price prediction web interface by using the available Kaggle dataset. Performed EDA on the dataset for feature engineering and then implemented the Support Vector Machine model for laptop price prediction, achieving an R2 score of 0.8. Streamlit library was used for the front end.
